United States Geological Survey professional paper Volume 1250

By -

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 52 pages. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1980 Excerpt: . . . (hand calculated), are too low. VHF rms slopes that exceed S-band rms slopes would not be expected. Clearly, roughness increases with decreasing scale length. However, if the two radars act as a filter and measure roughness contributions between two different scale-length increments, such a result is possible. Despite some minor inconsistencies, the bistaticradar results are very good: (1) The roughness estimates agree with the visual and photographic evidence for the Moon and are consistent with the geologic map units, (2) the combination of radar roughness, albedo, and infrared eclipse temperatures could be used to produce maps of the Moon which would, in general, resemble the distribution of the major terrain types, (3) the results on slope-probability distributions obtained by the radar are in general agreement with those obtained using photographs and photogrammetric techniques. EARTH-BASED RESULTS REFLECTION OF SOLAR RADIATION WITH WAVELENGTH FROM 0. 3 fm TO 2. 2 fm By Gerald...

Reviews

The publication is easy in read through safer to comprehend. It is actually loaded with wisdom and knowledge Its been printed in an extremely simple way and is particularly simply right after i finished reading through this pdf where actually modified me, affect the way i believe.

-- **Ms. Clementina Cole V**

This is the very best publication i have got read until now. It is definitely simplified but shocks within the fifty percent of the pdf. You may like how the article writer create this pdf.
